Plant Height: 10 inches

Flower Height: 18 inches

Spread: 3 feet

Spacing: 30 inches

Sunlight: ◐ ●

Hardiness Zone: 2a

Other Names: Plantain Lily, Funkia

Description:

A medium sized variety great for adding color and texture to summer beds, borders and containers; medium to dark leaves are edged in creamy white; fragrant lavender flowers rise above on tall scapes during the midsummer months

Ornamental Features

Sugar And Spice Hosta features dainty spikes of lightly-scented lavender tubular flowers rising above the foliage from mid to late summer. Its attractive glossy oval leaves remain green in colour with showy creamy white variegation throughout the season.

Landscape Attributes

Sugar And Spice Hosta is a dense herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Sugar And Spice Hosta is recommended for the following landscape applications;

363 Governors Rd East
Paris Ontario N3L 3E1
T. 519 752 4436
W. www.waltersgreenhouse.ca

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover

Planting & Growing

Sugar And Spice Hosta will grow to be about 10 inches tall at maturity extending to 18 inches tall with the flowers, with a spread of 3 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 30 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
